## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments filed 11/24/03 have been fully considered but they are not persuasive. Applicant's arguments that the amendment to claim 6 clarifies the difference between claim 6 and the applied art, is not persuasive. It has been held that the recitation that an element is "configured to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138. The plurality of cloth shot bags of Mangolds in view of Miller would be capable of striking a target when the cartridge is fired. The rejection stands.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mangolds (WO98/54538) and Miller (US Patent # 4,154,012). Mangolds discloses a non-killing cartridge (reference 15) to be fired by a firearm (within a barrel) and packed in a shell (reference 12). The device includes a plurality of weights (references 18-32), which may be of a bean bag type structure (page 7, lines 21 and 22) connected to each other. Bean bag type structures are known to be cloth bags normally filled with small cylindrical particles. Although Mangolds does not expressly disclose the bean bag type structures filled with metal shot, Miller does. Miller teaches that cloth bags filled with shot are known for riot control of non-lethal type (column 1, lines 11-

13). Therefore, to modify the Mangolds device to specify the use of metal shot within the bean bags would have been considered an obvious modification to those skilled in the art at the time the present invention was made, particularly since Miller shows the known use of bean bag type structures filled with metal shot for various purposes and metal shot would therefore just be another alternative filler material for the bean bags of the Mangolds device.

***Allowable Subject Matter***

4. Claims 7-15 are objected to as being dependent upon a rejected base claim, but would possibly be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 16-26 are allowed.

***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
